Jan 28 2026

To whom it may concern,

Cobalt conducted a pentest of Clarity AI's web application and API to assess the risk posture and identify security issues that could negatively affect Clarity AI's data, systems, or reputation. The scope of the assessment covered Clarity's web + API and included credentials for various levels of privilege within the scope. A Cobalt pentest team of 1 conducted this engagement between Jan 12, 2026 and Jan 26, 2026.

This pentest was a manual assessment of the security of the application's functionality, business logic, and vulnerabilities, such as those cataloged in the Open Web Application Security Project (OWASP) Top 10. The assessment also included a review of security controls and requirements listed in the OWASP Application Security Verification Standard (ASVS). The pentesters leveraged tools to facilitate their work. However, the majority of the assessment involved manual analysis.

During this engagement, Cobalt's testers reported their findings and rated them based on the following severities:

	CRITICAL	HIGH	MEDIUM	LOW	INFO
Open	0	0	0	0	0
Resolved	0	0	0	0	0
Total	0	0	0	0	0

As the team identified vulnerabilities, they reported all of these issues to Clarity AI for remediation.

Sincerely,

The Cobalt Team
